Facts of The Nature

Understand the nature to enjoy life

- We are facing the east. It is a good spot to see the sunrise and gain some energy as well as the moonrise and enjoy the romance of silver sea.
- The moon can be more beautiful on the first and the second day after the full-moon night. This beautiful nature inspired our first bartender to create a signature “Hua Hin Moonrise” cocktail since 2004.
- In Hua Hin the tide is high and low one time a day (different from other beaches where the tide can be high and low twice daily). One time a day allows maximum high and low tide. You will enjoy either very big beach or full water. When northeast wind brings the cold weather, the tide is high during the day and low at night time. Many romantic drama have a scene of romantic walk under the full moon of Hua Hin beachfront. This changes during the rest of the year when we have south-west wind. The tide is low during the day allowing many beach activities and high at night time creating a beautiful and romantic scene.

Internet Service
